PROFESSIONAL SUMMARY

Ambitious Computer Science graduate and certified Agentic AI professional with a strong foundation in Python, Java, SQL, and full-stack software development. Backed by hands-on project experience building machine learning models, decentralized blockchain applications, and AI-driven platforms. Adept at analyzing complex technical requirements, aligning modern software development lifecycles (SDLC), and applying cutting-edge frameworks (Spring Boot, ReactJS, LangChain). Eager to leverage strong algorithmic problem-solving skills and continuous technical learning toward innovative software engineering roles.

CERTIFICATIONS

Agentic AI Certified Foundations Associate - Issued by Oracle
Java Programming - Oracle Academy
Java Fundamentals - Oracle Academy

TECHNICAL SKILLS

Languages & Scripting: Python, Java, C, JavaScript, SQL, PL/SQL
Frameworks & Web: Django, ReactJS, PHP
Databases: MySQL, PostgreSQL, Oracle
AI & Agentic Technologies: LangChain, OpenAI Agents SDK, Model Context Protocol (MCP), OCI
Tools & Platforms: GitHub, VS Code, Jupyter Notebook, Apache, XAMPP/cPanel
Core Academic Coursework: Data Structures & Algorithms, Operating Systems, CN, (OOPS), (DBMS).

WORK EXPERIENCE

Sigma Soft LLC **August 2026 to Till date**
Bench Sales IT Recruiter

- Full-Cycle SDLC & Talent Acquisition Management: Managed the end-to-end recruitment lifecycle (SDLC for talent acquisition) from candidate sourcing and technical screening to client placement and onboarding across US markets using ATS platforms (Dice, LinkedIn Recruiter, Monster).
- Alignment with Modern Technology Trends**:** Evaluated and marketed IT consultants specializing in emerging tech trends—including Java Full Stack, Python automation, Cloud/DevOps infrastructure, and Data Engineering—aligning candidate capabilities with evolving enterprise client demands.
- Technical Screening & Skill Mapping: Assessed candidate competencies against rigorous technical benchmarks (covering OOPS, data structures, SQL databases, and modern frameworks) to ensure precise role matching.
- Vendor & Client Networking**:** Established and maintained strong professional relationships with tier-1 prime vendors and direct clients via email automation, CRM tracking, and communication channels to secure prompt interview submissions and placements.
- Pipeline Optimization & Submission Tracking**:** Coordinated technical interview schedules, managed client submission pipelines, tracked daily placements, and handled onboarding documentation through centralized databases.

INTERNSHIP

National Small Industries Corporation (NSIC)

Data Science Using Python

- **Task Automation & Process Optimization:** Engineered robust Python automation scripts to handle complex data parsing and processing pipelines, successfully cutting down manual execution time and reducing operational bottlenecks.
- **Conversational AI & Speech Integration:** Developed a prototype Jarvis-style voice assistant utilizing speech recognition and natural language processing libraries to execute command-driven local desktop operations and streamline user workflows.
- Built Python automation scripts for data processing tasks, developed a Jarvis-style assistant integrating voice command recognition, and improved workflow efficiency by automating repetitive operations

Q spiders

Java Full Stack Development

- Core Java & Advanced Programming: Mastered object-oriented programming (OOPs) principles, exception handling, multithreading, generics, and Java 8+ features including Lambda Expressions, Method References, and the Streams API.
- Enterprise Back-End Development: Developed secure and scalable RESTful web services using **Spring Boot**, Spring MVC, Spring Data JPA, and Hibernate ORM, implementing Dependency Injection and Spring Security (JWT-based authentication).
- Front-End Web Development**:** Built responsive, interactive single-page user interfaces utilizing **HTML5, CSS3, JavaScript (ES6+)**, and **ReactJS** (components, hooks, state management, and Axios for API integration).
- Database Management & SQL: Designed relational database schemas, wrote complex SQL queries, stored procedures, joins, and managed data persistence layers using **MySQL** and PostgreSQL.
- Version Control & Deployment Tool**s:** Utilized **Git/GitHub** for source code management, Maven for build lifecycle automation, Postman for API testing, and containerized applications using **Docker**.

ACADEMIC PROJECTS

DeepFake Detection based on Image Authenticity Percentage *(Python, Machine Learning)*

Designed and trained a Convolutional Neural Network (CNN) model to analyze image artifacts and structural inconsistencies, achieving 91.4% classification accuracy on manipulated image datasets. Implemented data preprocessing, feature extraction, and model evaluation pipelines using Python libraries (TensorFlow/Keras, Scikit-learn, OpenCV).

Chain of Custody: Leveraging Blockchain for Forensic Evidence Management (ReactJS, Django)

Developed a decentralized evidence-tracking web application using Django and ReactJS to guarantee the immutability and verifiable integrity of digital forensic records. I
mplemented cryptographic audit logs and smart-contract-inspired tracking workflows to improve chain-of-custody transparency and prevent unauthorized data tampering.

EDUCATION

- Bachelor of Engineering, Computer Science - Geethanjali College of Engineering and Technology, Hyderabad, Telangana, India. CGPA : 6.29 (2021-2025).
